HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Pericles or how to assess and to improve quality In Higher Education

Abstract :

The PIA project called PERICLES is a French project with two main objectives.

The first one is to offer to Higher Education (HE) institutions a methodology and a **digital tool to evaluate** the quality of the formation they provide.

The second objective is

- 1) the development of a **recommender system** able to suggest open educational resources to learners and
- 2) to identify learning paths based on actual practices in order to compare them to those designed by the trainers.

Partnership

Ongoing project ended in 2016

Teaching evaluation tool

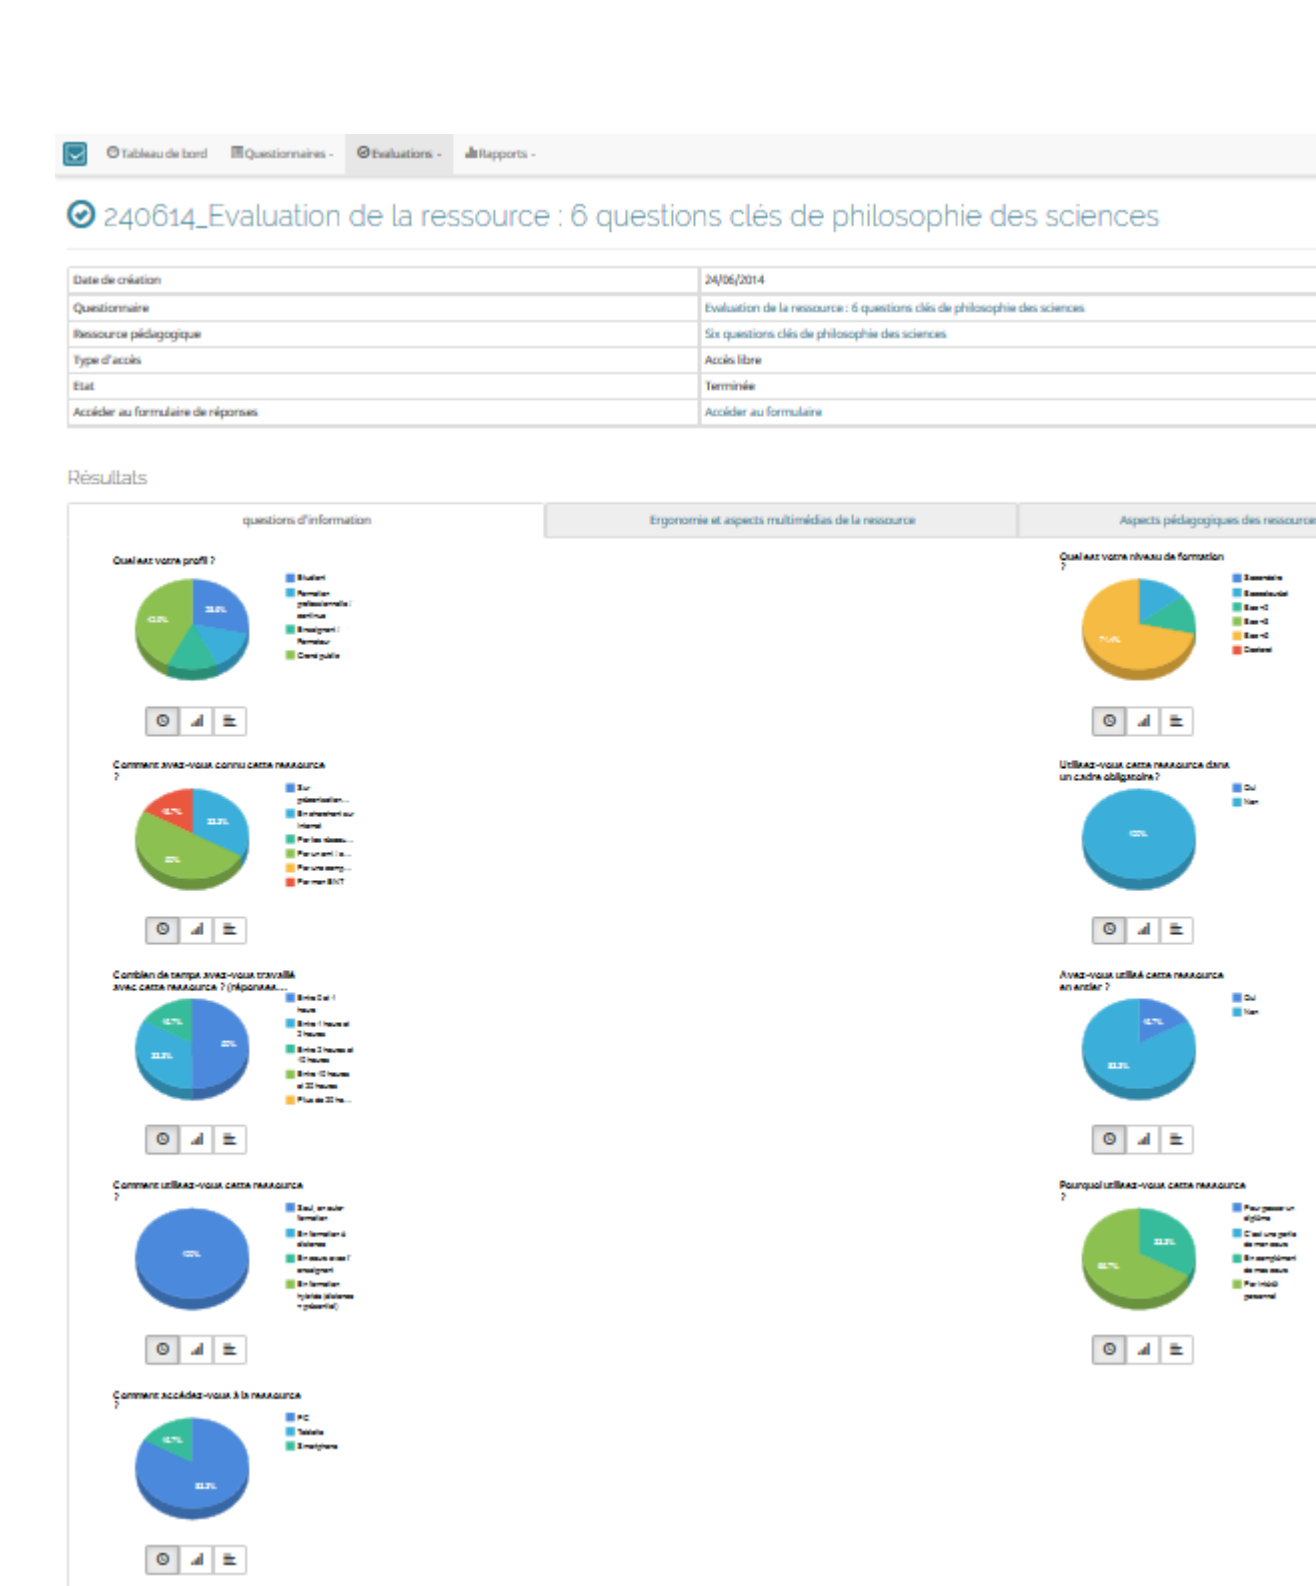

Create a
Questionnaire

Evaluation:
Associate the questionnaire
and send it to students

Results and
Reports

Students fill the
questionnaire

Teachers create questionnaire with help of a existing set of questions (more than 800) adapted to different contexts (face to face, distance education, MOOC, adult or initial training).

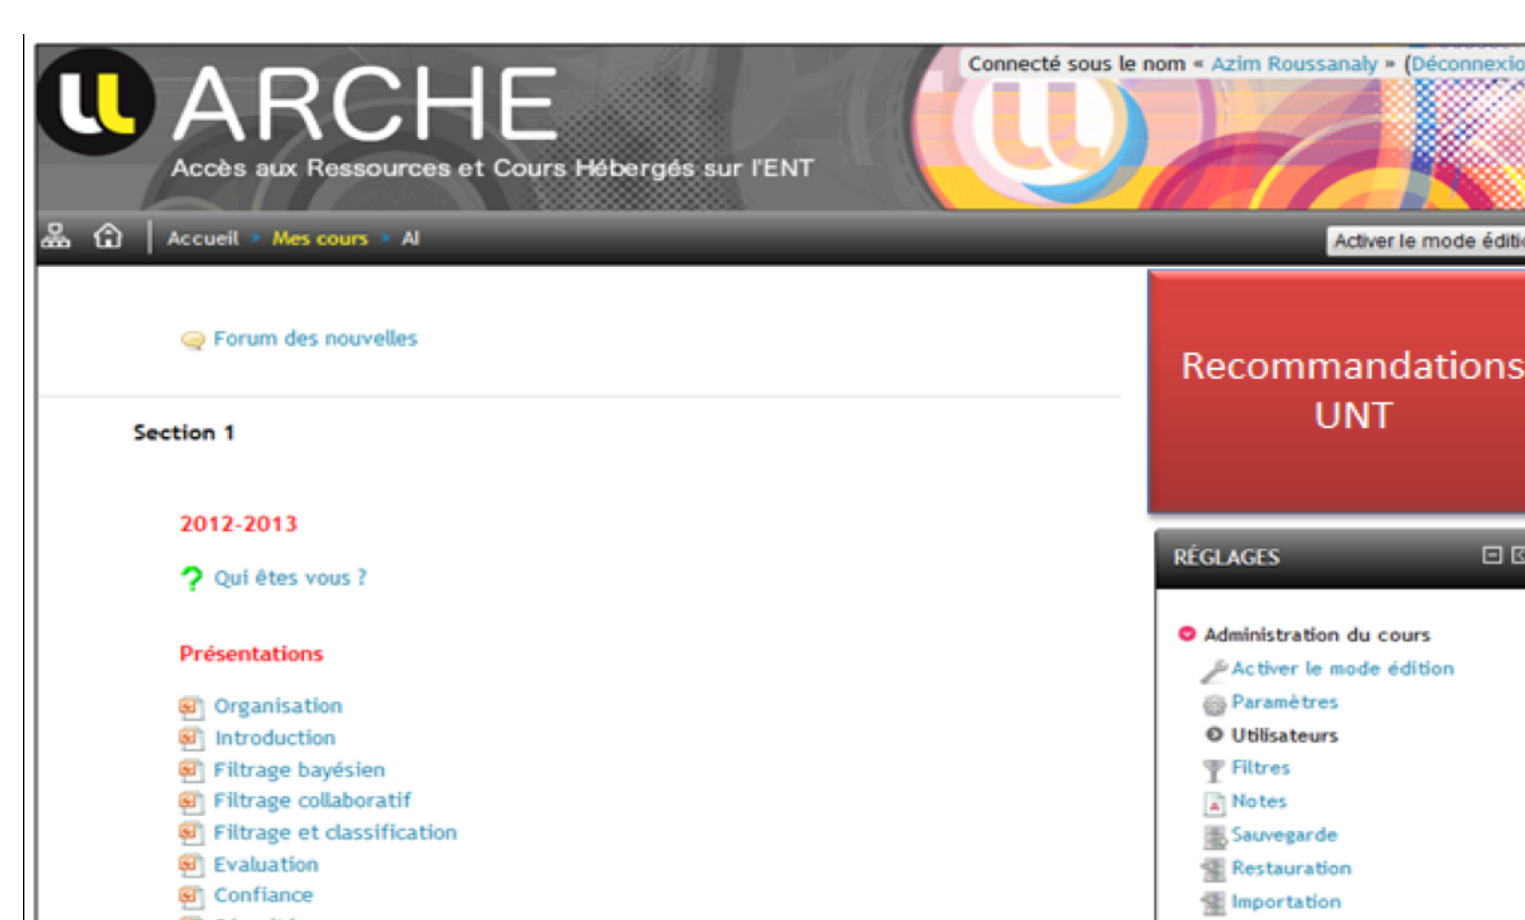

Recommender Systems

Objective

Adapting recommender systems to e-education context in order

- to pre-select resources a learner might be interested corresponding to
 - his targeted competency
 - complementary resources of his current curriculum
 - the successful experience of other users...
- to facilitate the access to the relevant resources by displaying them directly into the personal digital environment of the student
